

MOHAMMED SAIF IBRAHIM

FULL STACK DEVELOPER

mohammedsaifibrahim.dev@gmail.com | mohammedsaifibrahim.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full Stack Developer with hands-on freelance experience designing and building production-oriented business systems using React/Next.js, Node.js, and SQL Server. Experienced in analytics, automation, third-party integrations, AI-assisted applications, e-invoicing workflows, and LAN-based systems. Comfortable owning projects end-to-end across architecture, implementation, deployment, and iteration against evolving client requirements.

EXPERIENCE

Full Stack Developer (Freelance) — Technology People LLC Nov 2025 – Jul 2026

Client-facing freelance engagement, engaged twice by the same company across two builds

Technology People — Corporate Website Nov 2025 – Dec 2025

- Designed and built a responsive corporate website from scratch using semantic HTML5, Tailwind CSS, and vanilla JavaScript (framework-free), presenting solutions, industries served, and contact/demo flows.
- Developed reusable, responsive page sections and interactive UI/navigation components for a consistent experience across devices; deployed and maintained the production site at technologypeople.ae.

TPCompanion Jan 2026 – Jul 2026

- Architected and built a React-based companion web app backed by a Node.js Windows Service, bridging a live Shortcuts POS SQL Server database via a zero-cloud-dependency, LAN-only architecture.
- Built a flexible commission engine supporting flat-rate and slab-based (jump-slab and progressive-slab) payroll structures, replacing manual spreadsheet-based commission tracking.
- Delivered business analytics covering sales performance, new-vs-returning client trends, appointment volumes, peak-hours heatmaps, and inventory low-stock alerting for real-time operational visibility.
- Extended the system with WhatsApp/SMS messaging tied to live POS data, automating 10+ customer communication flows (confirmations, reminders, follow-ups, birthday and expiry alerts, promotions).
- Implemented Qatar GTA e-invoicing workflows covering invoice generation, UBL 2.1 processing, validation, signing, submission, response handling, and document-chain management.
- Integrated a locally hosted AI assistant using Qwen3 via Ollama, routing natural-language requests through validated application capabilities and deterministic read-only business tools rather than unrestricted database access.
- Shipped a centralized, silent auto-update mechanism to keep every client installation current across multiple business locations without manual intervention.

Frontend Developer (Freelance) — GlamSync, SaaS Startup Jul 2026 – Aug 2026

- Designed and developed a production-ready, multi-page SaaS marketing website using Next.js 14, TypeScript, React, and Tailwind CSS with a component-driven, responsive architecture.
- Built custom interactive UI systems — animated cursor, scroll-reveal animations, pricing comparison with billing toggle, FAQ accordion, and image carousel — without third-party animation/carousel libraries.
- Implemented SEO fundamentals via the Next.js App Router (structured metadata, OpenGraph/Twitter cards, dynamic sitemap, robots config, web app manifest) and contributed to broader product technical planning.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript, TypeScript, Tailwind CSS, HTML5

Backend: Node.js, Express.js, RESTful APIs, Windows Services

Database: SQL Server, FireBase, Data Modeling

Integrations & Compliance: WhatsApp API, SMS Gateway, Qatar GTA e-Invoicing, QR Code Generation

AI & Tools: Ollama, Qwen3, nomic-embed-text, Git, GitHub, Vercel, VS Code

EDUCATION

Bachelor of Engineering (BE), Computer Science & Engineering 2022 – 2026

ISL Engineering College (Osmania University)

CERTIFICATIONS & TRAINING

Virtual Internship — Web Full Stack Developer | EduSkills Academy

The Web Developer Bootcamp | Dr. Angela Yu

Complete Web Developer — Full Stack Web Development | Zero To Mastery
